Operators and Representation Theory Canonical Models for Algebras of Operators Arising in Quantum Mechanics / Palle E.T. Jorgensen

Palle E. T. Jorgensen

This survey of operators in Hilbert space begins with extensive background material. Additional topics include domains of representation, operators in the enveloping algebra, spectral theory, covariant representation and connections, and infinite-dimensional Lie algebras. Palle E. T. Jorgensen is a Professor of Mathematics at The University of Iowa.

Singular Integral Equations Boundary Problems of Function Theory and Their Application to Mathematical Physics

N. I. Muskhelishvili.

Translated by J. R. M. Radok

Singular integral equations play an important role in many areas of physics and theoretical mechanics, including elasticity, aerodynamics, and unsteady aerofoil theory. This high-level treatment by an outstanding Soviet mathematician is geared toward graduate students, engineers, mathematicians, and physicists. Topics include the Hölder condition, the Dirichlet problem, and related subjects.

Quantum Mechanics of One- and Two-Electron Atoms

Hans A. Bethe and Edwin E. Salpeter

This physics classic is an essential reference for calculations pertaining to hydrogen-like and helium-like atoms and their comparison with experimental results. The late Hans A. Bethe, a Nobel Laureate, was Professor of Physics at Cornell University. Edwin E. Salpeter is James Gilbert White Distinguished Professor of the Physical Sciences at Cornell University.

Linear System Theory The State Space Approach

Lofi A. Zadeh and Charles A. Desoer

The state-space approach is widely used in systems ranging from industrial robots to space guidance control. This landmark in the approach's development and applications was written by two pioneers in the field. The authors are affiliated with the Department of Electrical Engineering and Computer Science, University of California, Berkeley.

Finite Element Method Basic Technique and Implementation

Pin Tong and John N. Rossettos

This text introduces mathematical foundations, developing them coherently and rigorously to reveal the method's broad applications. It emphasizes use of the variational approach, providing appendixes on variational calculus and matrix algebra for a self-contained treatment. Detailed examples employ Poisson's equations and the general Sturm-Liouville problem.

An Introduction to the Mathematical Theory of Finite Elements

J. T. Oden and J. N. Reddy

This mathematics-oriented text features extensive discussion of Sobolev and Hilbert spaces and the theory of distributions. J. T. Oden is Director of the Institute for Computational Engineering & Sciences at the University of Texas at Austin, and author of Dover's *Finite Elements of Nonlinear Continua*. J. N. Reddy is Professor of Engineering at Texas A&M University. Reprint of the John Wiley & Sons, New York, 1976 edition.

Lyapunov Matrix Equation in System Stability Control

Zoran Gajic and
Muhammed T. Qureshi

This book provides solutions to many engineering and mathematical problems related to Lyapunov matrix equations, with considerations of mathematical development and applications that make it equally practical for problem solving and research. Zoran Gajic is Professor of Electrical and Computer Engineering at Rutgers University. Muhammad Tahir Javed Qureshi is affiliated with the Hewlett Packard Corporation.

Matrix and Tensor Calculus

With Applications to
Mechanics, Elasticity and
Aeronautics

Aristotle D. Michal

This volume offers a working knowledge of the fundamentals of matrix and tensor calculus that can be applied to a variety of fields, particularly scientific aeronautical engineering. Mathematicians, physicists, and meteorologists as well as engineers will benefit from its skillful combination of mathematical statements and immediate practical applications.

Wind Effects on Structures

Fundamentals and
Applications to Design,
Third Edition

Emil Simiu and Robert H. Scanlan

This text offers designers and engineers crucial knowledge concerning the atmosphere, the forces imposed on a structure by the wind, and the behavior of structures under the influence of these forces. Emil Simiu is a scientist at the National Institute of Standards and Technology (NIST) in Gaithersburg, Maryland. The late Robert H. Scanlan was Professor of Civil Engineering at Johns Hopkins University.
